Process: Each storage device listed was received with its drive intact. A Free Geek Toronto volunteer ran the drive through Free Geek Toronto's data sanitization software and recorded the report/reference ID that software produced. A Free Geek Toronto staff member then checked that report before the device could be refurbished, sold or recycled. Devices that could not be reused were recycled. [Process description to be confirmed by Free Geek Toronto.]

This certificate documents the process recorded in Relay for the devices listed. Free Geek Toronto's sanitization software remains the system of record for each report. It is not a warranty or a statement of compliance with any legal or industry standard unless one is named above.
